

# Rollers/Drums

**Philford can manufacture any type of conveyor drum. We have our own designs based around extensive experience in design and manufacture of drums and rollers in mines and quarries. These units are designed to be overhauled/refurbished. Philford will repair, reshell, reshaft any type of roller/drum where practical to do so.**

We have machining capability to manufacture/repair drums in excess of 1000mm diameter and up to 5 metres long. Philford can design and manufacture any type of drum including all calculations to customer specification. Our range is comprehensive and includes:

- Drive drums (internal or external bearings)
- Return rollers (internal or external bearings)
- Spiral drums
- Self cleaning rollers
- Stainless steel drums
- Lagged drums to customer specification
- Any size of drum/roller (large or small)
- Please ask about your requirements. We can arrange site visits to assess your full materials handling systems or your drum/roller needs
